GIOVENZANA INTERNATIONAL B.V.: AUTOMATION TECHNOLOGIES

AUTOMATION

The solutions offered by **Giovenzana** are the results of the market analysis of industrial electrical accessories requirements in conformity with all relevant international standards. The range includes:

- Phoenix cam switches from 12A to 200A;
- Regolus switch disconnectors from 16A to 160A;
- Pegasus, Orion and NEMA auxiliary controls;
- Thermoplastic limit switches, with manual reset, safety limit switches, M12 & pre-wired thermoplastic limit switches;
- Foot switches and micro switches.

QUALITY

Giovenzana, leader in the elevator and lifting equipment field, has gained a prominent position in the automation sector with the launch of industrial control devices into the market. For many years, all commercial and industrial operations have been integrated within the **UNI EN ISO 9001:2015** quality system.

CSQ certificate N 9105. GIOV.

Quality system is the end users guarantee that all production stages are closely followed under strict control and adhere to the requirements set by the company both in terms of customer expectations and compliance to the relevant international standards as proved by the various certificates **Giovenzana** holds for its products.

By the **UNI EN ISO 14001:2015**, **Giovenzana** keeps up with new technologies in order to reduce raw materials consumption, energy and natural resources and to minimize waste and emissions. This reduces the environmental impact.

The certification CSQ N 9191. GIBV.

COMPLIANCE

All **Giovenzana** products are manufactured according to the most relevant Cee directives. **Giovenzana** certifies this compliance with a declaration of conformity.

CERTIFICATIONS

In order to reach its high quality level **Giovenzana's** products are tested by multiple third parties. In order to obtain the UL mark, **Giovenzana** submits their products to Underwriter Laboratories Inc., one of the most eminent independent certification companies in the World.

CEE DIRECTIVES

From January 1st, 1997 it is compulsory to CE mark all electromechanical products; this has been outlined by an important regulation: 2006/95/CE Low Voltage Directives.

CE MARK

European directives, applied to all national regulations, set the minimum requirements in term of safety of all electrical material sold within the EU.

Compliance to these requirements is certified by the manufacturer by the CE mark placed on the products.

STANDARDS

Giovenzana's products comply with both the European EN and the American UL standards. These regulations, such as CEI EN 60204-1 (CEI 44-5) with regards to the safety requirements of the electrical circuits on board industrial machinery, define the characteristics, performance and use of the products.

EN EUROPEAN STANDARDS

The EN European standards are originated from IEC International standards and are the result of the collaboration between CENELEC (European Committee for Electrotechnical Standardization) member countries.

These standards cover and eliminate existing national standards that may be contradictory and non-compliant.

THERMOPLASTIC LIMIT SWITCHES **FTN SERIES**

A FTN SERIES THERMOPLASTIC LIMIT SWITCHES

DESCRIPTION

The **FTN series** thermoplastic limit switches, conform to EN 50047, have been developed to provide a range of options including a various choice of snap acting and slow acting and a wide range of actuator heads. The **FTN series** offers the option of rotating the head in 90° increments before installation to allow ease of mounting.

Giovenzana limit switches can be used in various applications in automation, lift and handling system fields. Operation of these limit switches is achieved by the sliding action of the guard or the moving object deflecting the plunger or lever. For safety applications it's important that upon actuation, the guard or other moving objects should not pass completely over the switch and allow the plunger or lever to return to its original position.

TECHNICAL DATA - HOUSING

Made of glass- reinforced polymer, self-extinguishing, shock-proof thermoplastic resin and with double insulation	
FTN Series one threaded conduit entry	Standard: M16
Protection degree	IP67 according to EN60529 with cable gland having equal or higher protection degree

GENERAL DATA

Positive opening operation	NC contact
Utilization category	AC15 B600, Snap Action AC15 B600
Minimum admissible current	5V, 5mA, DC
Insulation resistance	100MΩ min (DC 500V)
Contact resistance	25mΩ max (Initial)
Enclosure material	UL approved glass-filled polybutylene terephthalate
Operating temperature	Min -25°C (-18°F) / Max 80°C (+176°F)
Mechanical life expectancy	1x10 ⁷ cycles min
Electrically life expectancy	150.000 cycles min
Vibration resistance	IEC 68-2-6, 10-55Hz ± 1Hz, Excursion: 0.35mm, 1 octave/min
Conduit entry	Various
Fixing	2xM4

ELECTRICAL DATA

Rated thermal current (I _{th})	10A
Rated insulation voltage (U _i)	600V AC
Rated impulse withstand voltage (U _{imp})	2500V AC
Pollution degree	3
Protection against electric shock	Class II (Double insulation)

STANDARDS & APPROVALS

Standards	EN60947-5-1, UL508, EN50047
Approvals	cULus, EAC and CCC for all applicable directives

QUALITY MARKS

MAIN FEATURES

- Conforms to EN (TUV) standards corresponding to the CE marking.
- Positive opening operation of NC (Normally Closed) contacts conforming to IEC/EN 60947-5-1.
- Double insulation makes ground terminal unnecessary.
- Wide standard operating temperature range: -25°C to 80°C.
- Full range of actuator heads and levers suitable for safety applications.
- Sealing up to IP67.
- Wide switch variations (snap action and slow action basic switches).

ACCORDING TO STANDARDS

EN81.20 Safety contacts according to EN60947-5-1.
EN81.50 Protection degree higher than IP4x. Mechanical endurance higher than 1x10⁶ cycles.

INSTALLATION FOR SAFETY APPLICATIONS

Use only switches marked with the symbol . Always connect the safety circuit to the **NC contact** (normally closed contacts: 11-12 / 21-22 / 31-32) as required by **EN ISO 14119 paragraph 5.4** and as stated in the standard **EN81.20 paragraph 5.11.2.2.1**.

TAKE CARE!

If not expressly indicated in this chapter, for the correct installation and utilization of all articles see the instructions given on pages 92-93.

DATA TYPE APPROVED BY UL

Utilization categories:

FTN SERIES	Q300	
		A600 1 NC/1 NO Slow Action 2 NC Slow Action
		B600 1 NC/1 NO Snap Action
		A300 2 NC/1 NO Slow Action (3 poles) 3 NC Slow Action (3 poles)

Data of the housing type 1.
 For all contact blocks use 60 or 75°C copper (Cu) conductor and wire size No. 14 - 18 AWG.
 Terminal tightening torque of 7.1 lb in (0.8 Nm).
 In conformity with standard: UL508, CSA 22.2 No. 14 - 10.

Please contact our technical service for the list of approved products.

PROTECTION CLASS

IP67 Designed to be used even in the most severe environmental situations, these devices pass the immersion test IP67 in conformity with EN 60529.

DOUBLE INSULATION

Materials of group II, according to IEC 536, are made with double insulation. This consists of doubling the insulation capability by means of an additional divider in order to eliminate any electrical shock risk and avoid the need for any additional protections.

POSITIVE OPENING

A limit switch complies to the specification when all the normally closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied). Positive opening doesn't apply to NO contacts. Control switches with positive opening operation can be equipped with either slow-break or snap action contacts. In order to use different contacts on the same switch, it is necessary to electrically separate them; otherwise only one contact can be used. Every positive opening control switch must be marked on the external housing with the symbol on the left.

RUBBER ROLLERS

Different actuators with rubber rollers are available. The customer can choose the most suitable product depending on his needs. For example the lift speed in order to reduce the noise inside the cabin.

ADJUSTABLE LEVERS

In switches with revolving lever it is possible to adjust the lever with 18° steps for the whole 360° range. The positive movement transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft.

ADAPTIVE PLATE

Fixing plate equipped with large slots for adjusting the operating point developed for backwards compatibility with old products. Each plate has a double pair of fixing holes.

The plate is sold in kit with **KIT-FTN** code.

- The **KIT-FTN** is inclusive of:
- 1 plate (code 12907009);
 - 2 self-tapping screws 4x28 mm;
 - 2 washers Ø4 mm.

OVERTURNING LEVERS

It's possible to fasten the lever on switches on straight or reverse side, maintaining the positive coupling. In this way it is possible to obtain two different work plans of the lever.

ROTATING HEADS

In all switches, it is possible to rotate the head in 90° steps.

STRUCTURE DESCRIPTION

Metal Lever Setting

Grooves which engage the lever every 18° are cut in the operation indicator disk to prevent the lever from slipping against the rotary shaft.

Head

With roller lever models, the direction of the switch head can be varied to any of the four directions by loosening the roller lever switch screws at the four corners of the head.

Contact block

- Snap action:
1NC/1NO
Slow action:
1NC/1NO, 2NC, 2NC/1NO, 3NC

Cover

The cover, with a hinge on its lower part, can be opened by removing the screw of the cover, which ensures ease of maintenance and wiring.

Conduit Entry

- Standard: M16.
On request: M20, 1/2NPT, PG11, PG13.5.

M12 Connector pin arrangement - on request

POSITIVE OPEN MECHANISM

1NC/NO Contact (Snap action)

Conforms to EN60947-5-1 Positive Opening

If metal deposition between mating contacts occurs on the NC contact side, they can be pulled apart by the shearing force and tensile force generated when the safety cam or plunger engages the movable contact blade. When the safety cam or plunger is moved in the direction of the black arrow the Limit Switch releases.

1. When metal deposition occurs.
2. When contacts are being pulled apart.
3. When contacts are completely pulled apart.

1NC/NO Contact (Slow action)

Only the NC contacts have a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

2NC Contact (Slow action)

Both NC contacts incorporate a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

FTN198: Rope limit switch... Coming soon!

DESCRIPTION

The FTN198 switch has been specifically studied to control the lift shaft lights. The norm EN81.20 paragraph 5.2.1.5 states the necessity to have a light switching point next to the working area access and in the machines room. To comply with this standard usually at every floor there are installed lighting points which control a step relay with its considerable costs due to the number of the control points and their wiring. The FTN198 switch itself allows to control the shaft lights through its own wiring, without any need of different lighting points, relays or wiring.

INSTALLATION

The FTN198 switch is fixed to the superior part of the lift shaft and it's connected to a rope which goes down in the shaft next to the cabin. The rope has to be guided through rings in order to avoid the excessive oscillation caused by the cabin windage. At regular intervals along the rope, usually at every floor, an indicator is fixed to make the rope and its function clearly visible. The last indicator at the end of the rope has a weight inside to keep the rope tight. This way the operator on the cabin roof or in any position along the shaft has the possibility to operate the switch by pulling the practical indicator or the rope itself.

OPERATION

The FTN198 switch has a stable position function, which means that the first operation closes the contacts; the following one opens them and so on. To switch the shaft light on it is sufficient to pull the rope; to switch it off just repeat the operation.

LIMIT SWITCH + ACCESSORIES

FTN198	Rope limit switch

GIOVENZANA
INTERNATIONAL B.V.

LIMIT SWITCHES WITH MANUAL RESET
FTN1R SERIES

B FTN1R SERIES LIMIT SWITCHES WITH MANUAL RESET
DESCRIPTION

The **FTN1R series** limit switches with manual reset, conform to EN 50047, have been developed to provide a range of options including a various choice of snap acting and slow acting and a wide range of actuator heads. The **FTN1R series** offers the option of rotating the head in 90° increments before installation to allow ease of mounting.

Giovenzana limit switches can be used in various applications in automation, lift and handling system fields. Operation of these limit switches is achieved by the sliding action of the guard or the moving object deflecting the plunger or lever. For safety applications it's important that upon actuation, the guard or other moving objects should not pass completely over the switch and allow the plunger or lever to return to its original position.

TECHNICAL DATA - HOUSING

Made of glass- reinforced polymer, self-extinguishing, shock-proof thermoplastic resin and with double insulation	
FTN1R Series one threaded conduit entry	Standard: M16
Protection degree	IP67 according to EN60529 with cable gland having equal or higher protection degree

GENERAL DATA

Positive opening operation	NC contact
Utilization category	AC15 A600
Minimum admissible current	5V, 5mA, DC
Insulation resistance	100MΩ min (DC 500V)
Contact resistance	25mΩ max (Initial)
Enclosure material	UL approved glass-filled polybutylene terephthalate
Operating temperature	Min -25°C (-18°F) / Max 80°C (+176°F)
Mechanical life expectancy	1x10 ⁶ cycles min
Electrically life expectancy	150.000 cycles min
Vibration resistance	IEC 68-2-6, 10-55Hz ± 1Hz, Excursion: 0.35mm, 1 octave/min
Conduit entry	Various
Fixing	2xM4

ELECTRICAL DATA

Rated thermal current (I _{th})	10A
Rated insulation voltage (U _i)	600V AC
Rated impulse withstand voltage (U _{imp})	2500V AC
Pollution degree	3
Protection against electric shock	Class II (Double insulation)

STANDARDS & APPROVALS

Standards	EN60947-5-1, UL508, EN50047, EN1088
Approvals	cULus, EAC and CCC for all applicable directives

QUALITY MARKS

MAIN FEATURES

- Each model features a positive opening mechanism (NC contacts only) and equipped with a lockable head.
- Conforms to EN (TUV) standards corresponding to the CE marking.
- Positive opening operation of NC (Normally Closed) contacts conforming to IEC/EN 60947-5-1.
- Double insulation makes ground terminal unnecessary.
- Wide standard operating temperature range: -25°C to 80°C.
- Full range of actuator heads and levers suitable for safety applications.
- Sealing up to IP67.
- Wide switch variations (Snap action and slow action basic switches).

ACCORDING TO STANDARDS

EN81.20 Safety contacts according to EN60947-5-1.
EN81.50 Protection degree higher than IP4x. Mechanical endurance higher than 1x10⁶ cycles.

INSTALLATION FOR SAFETY APPLICATIONS

Use only switches marked with the symbol . Always connect the safety circuit to the **NC contact** (normally closed contacts: 11-12 / 21-22 / 31-32) as required by **EN ISO 14119 paragraph 5.4** and as stated in the standard **EN81.20 paragraph 5.11.2.1**.

TAKE CARE!

If not expressly indicated in this chapter, for the correct installation and utilization of all articles see the instructions given on pages 92-93.

DATA TYPE APPROVED BY UL
Utilization categories:

FTN1R SERIES	Q300	A600	1 NC/1 NO Slow Action 2 NC Slow Action
		B600	1 NC/1 NO Snap Action
		A300	2 NC/1 NO Slow Action (3 poles) 3 NC Slow Action (3 poles)

Data of the housing type 1.
 For all contact blocks use 60 or 75°C copper (Cu) conductor and wire size No. 14 - 18 AWG.
 Terminal tightening torque of 7.1 lb in (0.8 Nm).
 In conformity with standard: UL508, CSA 22.2 No. 14 - 10.

Please contact our technical service for the list of approved products.

PROTECTION CLASS

IP67 Designed to be used even in the most severe environmental situations, these devices pass the immersion test IP67 in conformity with EN 60529.

DOUBLE INSULATION

Materials of group II, according to IEC 536, are made with double insulation. This consists of doubling the insulation capability by means of an additional divider in order to eliminate any electrical shock risk and avoid the need for any additional protections.

POSITIVE OPENING

A limit switch complies to the specification when all the normally closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied). Positive opening doesn't apply to NO contacts. Control switches with positive opening operation can be equipped with either slow-break or snap action contacts. In order to use different contacts on the same switch, it is necessary to electrically separate them; otherwise only one contact can be used. Every positive opening control switch must be marked on the external housing with the symbol on the left.

OVERTURNING LEVERS

It's possible to fasten the lever on switches on straight or reverse side, maintaining the positive coupling. In this way it is possible to obtain two different work plans of the lever.

ADJUSTABLE LEVERS

In switches with revolving lever it is possible to adjust the lever with 18° steps for the whole 360° range. The positive movement transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft.

ADAPTIVE PLATE

Fixing plate equipped with large slots for adjusting the operating point developed for backwards compatibility with old products. Each plate has a double pair of fixing holes.

The plate is sold in kit with **KIT-FTN** code.

- The **KIT-FTN** is inclusive of:
- 1 plate (code 12907009);
 - 2 self-tapping screws 4x28 mm;
 - 2 washers Ø4 mm.

ROTATING RESET DEVICE

The device can be rotated independently from the above actuator, making the product highly flexible in the positioning. The reset is obtained by pulling back the blue button, as prescribed by standards, to avoid that unwanted objects could reset it accidentally.

ROTATING HEADS

In all switches, it is possible to rotate the head in 90° steps.

STRUCTURE DESCRIPTION

Metal Lever Setting

Grooves which engage the lever every 18° are cut in the operation indicator disk to prevent the lever from slipping against the rotary shaft.

Contact block

Has a positive opening mechanism separating the contacts when the contacts are welded.

Cover

The cover, with a hinge on its lower part, can be opened by removing the screw of the cover, which ensures ease of maintenance and wiring.

Head

With roller lever models, the direction of the switch head can be adjusted to any of the four directions by loosening the roller lever switch screws at the four corners of the head.

Reset Head

The direction of the reset head can be adjusted to any of the four directions.

Conduit Entry

Standard: M16.
On request: M20, 1/2NPT, PG11, PG13.5.

POSITIVE OPEN MECHANISM

1NC/NO Contact (Slow action)

Only the NC contacts have a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

2NC Contact (Slow action)

Both NC contacts incorporate a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

SELECTION DIAGRAM

- X11** - 1NC/1NO Slow Action
- W02** - 2NC Slow Action
- Z11** - 1NC/1NO Snap Action
- W12** - 2NC/1NO Slow Action
- W03** - 3NC Slow Action

Accessory sell separately

- KIT-FTN** is inclusive of:
- 1 plate (code 12907009);
 - 2 self-tapping screws 4x28 mm;
 - 2 washers ø4 mm.

Threaded conduit entry

Standard:
BLANK - M16

- On request:
- M** - M20
 - N** - 1/2NPT
 - G1** - PG11
 - G3** - PG13.5
 - C** - Connector

Wiring

Customized wirings are available on request, with connectors and cables in accordance with customers' specifications.

40 MM THERMOPLASTIC LIMIT SWITCHES
FTNG SERIES

C FTNG SERIES 40 MM THERMOPLASTIC LIMIT SWITCHES

DESCRIPTION

The **FTNG series** 40 mm thermoplastic limit switches, conform to EN 50047, have been developed to provide a range of options including a various choice of snap acting and slow acting and a wide range of actuator heads.

The **FTNG series** offers the option of rotating the head in 90° increments before installation to allow ease of mounting.

The dimensions of this line comply with the indications of EN 50041.

Giovenzana limit switches can be used in various applications in automation, lift and handling system fields.

The **FTNG series** is particularly suitable for heavy applications, thanks to its solidity and reliability.

Operations of these limit switches is achieved by the sliding action of the guard or other moving objects should not pass completely over the switch and allow the plunger or lever to return to its original position.

TECHNICAL DATA - HOUSING

Made of glass- reinforced polymer, self-extinguishing, shock-proof thermoplastic resin and with double insulation	
FTNG Series one threaded conduit entry	Standard: M20
Protection degree	IP67 according to EN60529 with cable gland having equal or higher protection degree

GENERAL DATA

Positive opening operation	NC contact
Utilization category	AC15, A600, B600, A300 (for contact block type)
Minimum admissible current	5V, 5mA, DC
Insulation resistance	100MΩ min (DC 500V)
Contact resistance	25mΩ max (Initial)
Max switching speed	250 mm/s
Max switching frequency	6000 operation per hour
Enclosure material	UL approved glass-filled polybutylene terephthalate
Roller Material	Metal, PA, rubber
Operating temperature	Min -25°C (-18°F) / Max 80°C (+176°F)
Mechanical life expectancy	1x10 ⁷ cycles min
Electrically life expectancy	150.000 cycles min
Vibration resistance	IEC 68-2-6, 10-55Hz ± 1Hz, Excursion: 0.35mm, 1 octave/min
Conduit entry	Various
Fixing	2xM4

ELECTRICAL DATA

Rated thermal current (I _{th})	10A
Rated insulation voltage (U _i)	600V AC
Rated impulse withstand voltage (U _{imp})	2500V AC
Pollution degree	3
Protection against electric shock	Class II (Double insulation)

STANDARDS & APPROVALS

Standards	EN60947-5-1, EN50047, EN1088
Approvals	cULus, EAC and CCC for all applicable directives

QUALITY MARKS

MAIN FEATURES

- Conforms to EN (TUV) standards corresponding to the CE marking.
- Positive opening operation of NC (Normally Closed) contacts conforming to IEC/EN 60947-5-1.
- Double insulation makes ground terminal unnecessary.
- Wide standard operating temperature range: -25°C to 80°C.
- Full range of actuator heads and levers suitable for safety applications.
- Sealing up to IP67.
- Wide switch variations (Snap action and slow action basic switches).

ACCORDING TO STANDARDS

- EN81.20** Safety contacts according to EN60947-5-1.
- EN81.50** Protection degree higher than IP4x. Mechanical endurance higher than 1x10⁶ cycles.

INSTALLATION FOR SAFETY APPLICATIONS

Use only switches marked with the symbol . Always connect the safety circuit to the **NC contact** (normally closed contacts: 11-12 / 21-22 / 31-32) as required by **EN ISO 14119 paragraph 5.4** and as stated in the standard **EN81.20 paragraph 5.11.2.2.1**.

TAKE CARE!

If not expressly indicated in this chapter, for the correct installation and utilization of all articles see the instructions given on pages 92-93.

DATA TYPE APPROVED BY UL

Utilization categories:

FTNG SERIES	Q300	A600	1 NC/1 NO Slow Action 2 NC Slow Action
		B600	1 NC/1 NO Snap Action
		A300	2 NC/1 NO Slow Action (3 poles) 3 NC Slow Action (3 poles)

Data of the housing type 1.

For all contact blocks use 60 or 75°C copper (Cu) conductor and wire size No. 14 - 18 AWG.

Terminal tightening torque of 7.1 lb in (0.8 Nm).

In conformity with standard: UL508, CSA 22.2 No. 14 - 10.

Please contact our technical service for the list of approved products.

PROTECTION CLASS

IP67 Designed to be used even in the most severe environmental situations, these devices pass the immersion test IP67 in conformity with EN 60529.

DOUBLE INSULATION

Materials of group II, according to IEC 536, are made with double insulation. This consists of doubling the insulation capability by means of an additional divider in order to eliminate any electrical shock risk and avoid the need for any additional protections.

POSITIVE OPENING

A limit switch complies to the specification when all the normally closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied). Positive opening doesn't apply to NO contacts. Control switches with positive opening operation can be equipped with either slow-break or snap action contacts. In order to use different contacts on the same switch, it is necessary to electrically separate them; otherwise only one contact can be used. Every positive opening control switch must be marked on the external housing with the symbol on the left.

OVERTURNING LEVERS

It's possible to fasten the lever on switches on straight or reverse side, maintaining the positive coupling. In this way it is possible to obtain two different work plans of the lever.

ADJUSTABLE LEVERS

In switches with revolving lever it is possible to adjust the lever with 18° steps for the whole 360° range. The positive movement transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft.

RUBBER ROLLERS

Different actuators with rubber rollers are available. The customer can choose the most suitable product depending on his needs. For example the lift speed in order to reduce the noise inside the cabin.

ROTATING HEADS

In all switches, it is possible to rotate the head in 90° steps.

CONTACT BLOCK FORM

Contact Form	1NC/1NO Slow Action	2NC Slow Action	1NC/1NO Snap Action	2NC/1NO Slow Action	3NC Slow Action

M12 Connector pin arrangement - on request

STRUCTURE DESCRIPTION

Metal Lever Setting

Grooves which engage the lever every 18° are cut in the operation indicator disk to prevent the lever from slipping against the rotary shaft.

Contact block

Snap Action: 1NC/NO
Slow Action: 1NC/NO, 2NC, 2NC/1NO, 3NC.

Cover

The cover, with a hinge on its lower part, can be opened by removing the screw of the cover, which ensures ease of maintenance and wiring.

Head

With roller lever models, the direction of the switch head can be adjusted to any of the four directions by loosening the roller lever switch screws at the four corners of the head.

Conduit Entry

Standard: M20.
On request: 1/2NPT, PG13.5.

SAFETY LIMIT SWITCHES WITH KEY
STNK SERIES

D STNK SERIES SAFETY LIMIT SWITCHES WITH KEY

DESCRIPTION

The **STNK series** is a key operated safety interlock switch designed to fit at the leading edge of sliding, hinged or lift-off guards. With its dual entry slots and rotatable head, the versatile STNK series can offer up to eight different actuator entry options. Operation of the switch is achieved through the insertion of a specially profiled stainless steel key that is permanently mounted to the guard door. Available with one NC safety contact or two NC contacts, the STNK series is sealed to IP67 and has various conduit entries. A blanking plug is supplied for the unused key entry.

TECHNICAL DATA - HOUSING

Made of glass- reinforced polymer, self-extinguishing, shock-proof thermoplastic resin and with double insulation	
STNK Series one threaded conduit entry	Standard: M16
Protection degree	IP67 according to EN60529 with cable gland having equal or higher protection degree

GENERAL DATA

Positive opening operation	NC contact
Utilization category	AC15 A600
Insulation resistance	100MΩ min (DC 500V)
Contact resistance	25mΩ max (Initial)
Travel for positive opening	Various
Maximum actuation frequency	2 cycles/sec
Enclosure material	UL approved glass-filled polybutylene terephthalate
Actuator material	Stainless steel
Operating temperature	Min -25°C (-18°F) / Max 80°C (+176°F)
Mechanical life expectancy	1x10 ⁶ cycles min
Electrically life expectancy	150.000 cycles min
Vibration resistance	IEC 68-2-6, 10-55Hz ± 1Hz, Excursion: 0.35mm, 1 octave/min
Conduit entry	Various
Fixing	2xM4

ELECTRICAL DATA

Rated thermal current (I _{th})	10A
Rated insulation voltage (U _i)	600V AC
Rated impulse withstand voltage (U _{imp})	2500V AC
Pollution degree	3
Protection against electric shock	Class II (Double insulation)

STANDARDS & APPROVALS

Standards	EN60947-5-1, UL508, EN50047, EN1088
Approvals	cULus, EAC and CCC for all applicable directives

QUALITY MARKS

MAIN FEATURES

- Contacts: Slow action 1NC/1NO; 2NC - Snap action 1NC/1NO.
- Positive opening mechanism.
- Double insulation structure.
- Eight possible actuator entry points, easy to install.
- Right angle, flat and adjustable keys.
- Robust stainless steel keys.
- IP67 enclosure rating.

DATA TYPE APPROVED BY UL

Utilization categories:

STNK SERIES	Q300	A600	1 NC/1 NO Slow Action 2 NC Slow Action
		B600	1 NC/1 NO Snap Action
		A300	2 NC/1 NO Slow Action (3 poles) 3 NC Slow Action (3 poles)

Data of the housing type 1.

For all contact blocks use 60 or 75°C copper (Cu) conductor and wire size No. 14 - 18 AWG.

Terminal tightening torque of 7.1 lb in (0.8 Nm).

In conformity with standard: UL508, CSA 22.2 No. 14 - 10.

Please contact our technical service for the list of approved products.

PROTECTION CLASS
IP67 These series switches are all IP67 rated.

DOUBLE INSULATION

Materials of group II, according to IEC 536, are made with double insulation. This consists of doubling the insulation capability by means of an additional divider in order to eliminate any electrical shock risk and avoid the need for any additional protections.

POSITIVE OPENING

A limit switch complies to the specification when all the normally closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied). Positive opening doesn't apply to NO contacts. Control switches with positive opening operation can be equipped with either slow-break or snap action contacts. In order to use different contacts on the same switch, it is necessary to electrically separate them; otherwise only one contact can be used. Every positive opening control switch must be marked on the external housing with the symbol on the left.

STRUCTURE DESCRIPTION

Head
The head can be mounted in four directions. The operation key can be inserted in five directions including the downward direction.

Operation key
The dedicated key prevents operational mistakes and forcibly separates the contacts.

Cover
The cover, with a hinge on its lower part, can be opened by removing the screw of the cover, which ensures ease of maintenance and wiring.

Protection Degree
The plunger has an O-ring. The switch casing ensures IP67 (except the keyhole, with ensures IP00). Use STNK series in places where the keyhole is free from oil and metal chips.

Contact block
Has a positive opening mechanism which forcibly separates the NC contacts even if they are welded. The built-in switch incorporates a pair each of NC contacts and NO contacts or two pairs of NC contacts.

Conduit Entry
Standard: M16.
On request: M20, 1/2NPT, PG11, PG13.5.

M12 CONNECTION & PRE-WIRED LIMIT SWITCHES
FCT SERIES

E FCT SERIES M12 CONNECTION & PRE-WIRED THERMOPLASTIC LIMIT SWITCHES

DESCRIPTION

Giovenzana offers two lines of pre-wired switches:

FCT series: prewired thermoplastic switches with IP67 protection rating with 2 mt cable. They are available in two different versions:

- with side cable entry;
 - with vertical cable entry.
- (The standard cable length is 2 mt but on request are available different sizes).

FCTM series: thermoplastic pre-wired switches with IP67 protection rating with M12 connector.

TECHNICAL DATA - HOUSING

Made of glass fibre reinforced technopolymer, self-extinguishing, shock-proof and with double insulation	
FCT Series	Version with integrated cable, standard lenght 2 mt. Other lenghts available on request.
FCTM Series	Version with integrated M12 connector.

GENERAL DATA

Utilization category	AC15 (Ue=240V, Ie=1.5A) - DC13 (Ue=240V, Ie=0,27A)
Insulation resistance	100MΩ min (DC 500V)
Conduit resistance	25mΩ max (Initial)
Operating temperature	Min -25°C (-18°F) / Max 70°C (+158°F)
Mechanical life expectancy	1x10 ⁷ cycles min
Electrically life expectancy	150.000 cycles min
Vibration resistance	IEC 68-2-6, 10-55Hz ± 1Hz, Excursion: 0.35mm, 1 octave/min

ELECTRICAL DATA

Rated thermal current (Ith)	Pre-cabled switches: 10A - Switches with M12, 4 pin connector: 4A

GIOVENZANA

INTERNATIONAL B.V.

MICRO SWITCHES MFI SERIES

F MFI SERIES MICRO SWITCHES

DESCRIPTION

Giovenzana's standard micro switches with self cleaning contacts, supplied with operator, are high-precision, snap action switches and these are the main features for which they are notable:

- Fast and reliable switching largely independent of actuating speed;
- High electrical ratings but with small dimensions;
- High repeat accuracy of switching points and forces;
- Low operating force;
- **NC positive opening**
- Very long service life
- Equipped with self cleaning switching contacts in silver alloy
- Available with the pin plunger or various type of actuation lever.

• Easy adaptation to numerous applications such as joystick, air conditioner, food processor, juice maker, mixer, coffee machines, disabled footboards, ...

We've six lines of micro switches (one of them dedicated to Atex field):

MFI series (pag. 79-81)

Micro switches, normalized with self-cleaning contacts including actioning lever with 7 different versions.

- Faston terminal 6.3 x 0.8

MFI.S series (pag. 82-84)

Micro switches, normalized with self-cleaning contacts including actioning lever with 7 different versions.

- Solder micro switches

MFI.ST series (pag. 85-87)

Micro switches, normalized with self-cleaning contacts including actioning lever with 7 different versions.

- Screw terminal

MFI.STP series (pag. 88-90)

Micro switches, normalized with self-cleaning contacts including actioning lever with 7 different versions.

- Screw terminal and plate protection

MFI.T (pag. 91)

Micro switch with tower actuator and threaded flange.

Also available the MFI.Ex series.
Micro switches dedicated to use in hazardous areas and potentially explosive atmospheres.
Ask the dedicated Atex catalogue!

Standards	IEC/EN61058, UL1054
Approvals	cRUus, CE for all applicable directives

STRUCTURE DESCRIPTION

SINGLE-BREAK CHANGEOVER MFI Micro switch

Micro switches are activated by a spring-operated (or snap-action) mechanism. Depressing the actuator triggers the switching operation, with a pre-defined force and travel. The switching speed itself is a largely independent of the speed of actuation.

ACTIONING LEVERS

It is possible to attach an actioning lever to a snap switch in order to meet the specific requirements of a given application. Doing so usually alters the travel and forces involved in the switching operation, depending on the length of the levers. By attaching an appropriate actioning lever, it is possible to increase travel and/or reduce actuating force required.

OPERATION DEVICE (PLUNGER)

Applying force to the actioning lever of a snap switch releases the snap action mechanism, which in turn triggers the switching operation.

POSITIVE OPENING

An additional internal mechanism, made of non-resilient parts, forces the opening of NC contacts in case of accidental welding (overload, short circuit, ...) or snap action mechanism failure. Models fitted with this function are particularly suitable for safety related applications according to ISO13849-1 or EN60204-1. To ensure proper functioning of positive opening operation, the operating device must be depressed up to the positive opening position.

SNAP ACTION SWITCH TECHNOLOGY

OPERATING CHARACTERISTICS

OF - OPERATING FORCE

The force applied to the actuator required to operate the switch contacts.

RF - RELEASING FORCE

The value to which the force on the actuator must be reduced to allow the contacts to return to the normal position.

TF - TOTAL FORCE

The force applied to the actuator required to reach the stopper from the free position.

FP - FREE POSITION

The initial position of the actuator when there is no external force applied.

OP - OPERATING POSITION

The position of the actuator at which the contacts snap to the operated contact position.

RP - RELEASING POSITION

The position of the actuator at which the contacts snap from the operated contact position to their normal position.

TTP - TOTAL TRAVEL POSITION

The position of the actuator when it reaches the stopper.

PT - PRETRAVEL

The distance or angle through which the actuator moves from the free position to the operating position.

OT - OVERTRAVEL

The distance or angle of the actuator movement beyond the operating position.

MD - MOVEMENT DIFFERENTIAL

The distance or angle from the operating position to the realising position.

TT - TOTAL TRAVEL

The sum of the pretravel and total overtravel expressed by distance or angle.

MFI SERIES - FASTON TERMINAL 6.3 x 0.8 MICRO SWITCHES

GENERAL DATA

Operating temperature	Min -25°C (-18°F) / Max 85°C (+185°F)

INSTALLATION OF SINGLE SWITCHES WITH SAFETY FUNCTION

- Use only switches with the symbol
- Connect the safety circuit to the NC normally closed contacts (11-12, 21-22, 31-32).
- Actuate the switch at least up to the positive opening travel.
- The actuation system must be able to exert a force that is greater than positive opening force.
- The device must be affixed in compliance with EN ISO 14119.

Whenever the machine guard is opened and during the whole operating travel, the switch must be pressed directly or through a rigid connection. Only in this way the positive opening of normally closed NC contacts (11-12, 21-22, 31-32) is guaranteed.

In safety applications with only one switch for each guard, the switches must never be activated by a release or through a non rigid connection.

According to EN ISO 14119 paragraph 5.2 letter h: "the position sensors must not be used as mechanical stop".

- The actuator must not exceed the maximum travel.
- The guard must not use the switch head as a mechanical stop.
- The actuator must not strike directly against the switch head.

CONTACT ELEMENTS

CONTACT ELEMENTS ACTING INDEPENDENTLY (OR SNAP ACTION)

Is defined, under IEC947-5-1/EN6094-5-1, the contact element of a device for manual or automatic control circuits where the speed of motion of the contact is virtually independent of the speed of motion of the actuator. Commonly called "quick trigger" the electrical behavior of these elements means that the contact is in order even in the slow movements of the actuator. These contact elements have position doesn't coincide with the release of drive (differential stroke).

CONTACT ELEMENTS DIRECT ACTING (OR SLOW ACTION)

Is defined, under IEC947-5-1/EN6094-5-1, the contact element of a device for manual or automatic control circuits where speed of movement of the contact depends on the speed of motion of the actuator.

CONTACT BLOCKS CONFIGURATION (according to IEC/EN60947-5-1)

Contact blocks with 4 terminals must be marked with Zb symbols as shown in the picture.

The two moving contacts are electrically insulated.

OPERATING LEVER REVERSE MOUNTING

FTN - FTN1R - FTNG Series

RESETTING POSITION SETTING THROUGH 18° STEPS

FTN - FTN1R - FTNG Series

SNAP ACTIONS RECOMMENDED

In case of a relatively slow movement of the actuator, SNAP ACTION CONTACTS ARE RECOMMENDED.
